The Material of construction shall be SS 304 with Sloping Opening at the Centre, so that no honey remains in this tank on completion of the process. The Opening of Tank shall be covered with Steel Mesh of 400 Micron and the Lower Bottom Opening shall be fitted with SS ball Valve of 1". The Steel Mesh shall be removable and easy to clean. The tank shall be of suitable thickness and sturdy to withstand the weight of heavy honey cans, used for charging honey. The outlet of tank is connected to gear pump.</p> <p>This Tank have a Provision of Level Rise Tube at outer to Check the Honey Level from Outside with Calibrated Scale over it which show Amount of Honey left inside the tank in kg.</p>
Gear Pump	<p>The gear pump shall be of stainless steel. This gear pump shall be coupled with 1:40 reduction gear box, and driven by 1 HP motor. The piping is also in full 304 food grade Stainless Steel. The outlet of the raw honey pump shall split into 2 directions, both controlled by 1" ball valves. One of the lines going back to pre-filter tank, while the other goes into the Pre heating tank. Basic Output Capacity of Gear Pump shall be (2000- 2500) lts/hr. Reduction gear Box to operate gear pump at desired output.</p> <p>They Rotating part inside the Gear Pump have a SS 316 Material and Need a Certificate for same.</p>
Pre-Heating Tank (PHT)	<p>This is a tube type heat exchanger device. The material of construction shall be SS 304 Food grade. In this tank honey passes through food grade SS steel pipe, which is surrounded by hot water. The arrangement to heat the honey passing through the pipe to 45° C, either by circulation of hot water from separate hot water tank, or uniform heating arrangement done on the pre heating tank itself. The arrangements shall be so that there shall be no drop of temperature in continuous run. Temperature sensor shall be provided, to cut off heaters or hot water circulation when the right temperature is achieved, and also to start back the heaters when temperature drops below the desired level. Heater Capacity should be such that the desired temperature is attained within 30 minutes and maintained throughout the process. Temperature gauge shall be provided to accurately measure the temperature of honey at this stage. The Outer Surface of Tank shall be thermally Insulated. The cut off limit shall be set at 48°C and 42°C shall be restart temperature. set up a device to read the honey temperature at the exit, if the temperature is acceptable then the solenoid opens and allows the honey to flow ahead else the honey is sent to pre filter tank and it continues to do so till it achieves the right temperature. The honey is then flowed in the filtration system when temperature is achieved.</p>

Filtration	Full stainless-steel self-locking high pressure filter having poly propylene filters made of 20-micron size. These will be 2 parallel filters with 100-, 40- and 20-micron Filter Each. If one chokes, second one will start with a buzzer Alert to clean the first. All the filters are fitted with sensors so that if some filter gets choked the sensor will cut off the flow valve and the honey will be diverted to the pre filter tank. This also will give a buzzer and an indicator will glow on the control panel showing the filter /s has choked up and need clean up.
Processing Tank	<p>This shall be shell and tube type or any other which is suitable for viscous fluids. The honey having temperature of 45°C coming from preheating tank is heated to 60°C. Honey should flow in a thin form enclosed in ss pipe coiling or ss plates, in a chamber or shell maintained at 65°C. The material of construction shall be SS 304 food grade.</p> <p>The coil/tube /plate in the system shall be tested for any leak before installing which shall be demonstrated before the demonstrator of the buyer to avoid any breakdown and loss of time and material after installation. Temperature gauge shall be provided to accurately measure the temperature of honey at this stage. Heater Capacity should be such that the desired temperature is attained within 30 minutes and maintained throughout the process.</p> <p>The proper valves shall be provided for easy control of flow rate.</p>
Moisture Reduction	Falling film evaporator, where honey will flow in form of a thin film, so that maximum moisture reduction is achievable. The temperature of vacuum evaporation shall be 60°C±2°C. Subjected to (710 to 730) mm HG vacuum by means of high-capacity vacuum pump and self-controlled heating. Honey is to just pass through the system and shall not be held still in the moisture reduction unit to avoid overheating. The moisture reduced honey shall pass to the cooling tank.
Cooling Tank	This is also a tube type heat exchanger, but without heaters, instead it has a cooling system (a Cooling water from Chilling Plant) which runs on water circulation pump of 0.5 Hp. Temperature of Cooling Water shall be 15° C±2°C. Temperature Gauge shall be provided at the outlet of cooling tank of Chilling to read the temperature of water at inlet to cooling tank of Honey. It should be noted that the efficiency is partially depended on the effective cooling of honey.
Special Lobe Pump	A special lobe pump with seals to prevent vacuum leak shall be fitted in the line to pass the moisture reduced honey to the settling tank. RPM shall be fixed through motor pully. arrangement as required.
Moisture condensation Unit	This is a very thick walled (3mm thick SS 304) drum with dished bottom and top. Volume approx. 30% of the rated capacity of the plant. This drum has top entry and bottom exit with 1 more entry for vacuum connection. On the top entry there is a flange to connect to another condensing unit which has a helical coil of SS pipe. This pipe coil is submersed in cold water which comes from Chilling plant at Temperature of 15° C±2°C and circulated with a pump of 0.5 Hp.
Condensate Trap	2 condensate tanks of 20 ltr capacity of appropriate thickness to withstand (710 to 730 mm of HG vacuum) shall be provided.
Settling tank	Settling tanks have a Capacity to store of 550 kg with a level Pipe and Scale over it. There will be 6 Settling tanks so that honey can settled for 6 days without shifting honey. Settling Tank also have a Inverted Conical Screw type Vent for release of air. Tanks shall have manhole arrangement for easy cleaning. Shall be fitted with 1" drip cut valves. A separate drain also should be provided at the bottom, which is plugged for use during washing of the settling tanks.

Vacuum Pump	Capacity of Vacuum Pump shall be such that easily achieve Vacuum in between (710-740) mm of Hg. Solenoid valve should be provided near vacuum pump on vacuum line, so that when there is power failure it will open automatic and release vacuum from honey tanks, thus preventing honey from entering condenser.
Chilling Plant	Chilling Plant with basin capacity necessary to cool the honey to room temperature instantly. Should have a Cooling Capacity of 3 ton of refrigeration.
Flow Meter	There will be 2 set of flow meters , 1 at inlet of pre heating tank and 1 at exit of honey cooling tank, before the special pump, so that the flow rate of honey can be controlled. Flow Meter Can Easily able to read 30 kg/hr to 90kg per hour. During the installation, the position may be changed to position where appropriate display is achieved.
Honey Liquefier	If the honey is granulated it is used to liquefy, before taking in the plant. This shall be square SS Tank, fitted with strong grill 9 inches from bottom. 4 KW heater with thermostat to cut off at 65°C shall be fitted at the bottom. It should have capacity to hold 4 Nos, 50 kg honey drums. The liquefier shall be mounted on iron trolley for easier movement 1 inch drain with cock should be provided for draining water.
